The CWT from Power Electronic Measurements Ltd. is a state of the art wide-bandwidth ac current probe.

The CWT is ideal for power electronics development work because it combines an easy to use thin, flexible, clip-around coil with an ability to accurately replicate fast switching current waveforms be they sinusoidal, quasi-sinusoidal or pulsed.

Applications
- Monitoring current waveforms for semiconductor switches
- Development and servicing of power electronic equipment
- Monitoring high frequency sinusoidal currents
- Measuring fault currents or circuit breaker interruption currents
- Measuring pulses of current
- Measuring ac currents superimposed on large dc currents
- Measuring harmonic current components
- Measuring signal or earth leakage currents in 3-phase supply systems

Features
- Measurement range from 300mA to 300,000A
- Typical bandwidths from 0.1Hz to 16MHz
- The DC offset is no greater than 2mV over the operating temperature range.
- Thin and flexible, ‘clip-around’ coil in lengths from 300mm to 1000mm – other lengths available as custom designs
  - Easy to insert probe in confined spaces
  - Robust lockable ‘clip-in’ mechanism
  - Non-intrusive – loading the circuit under test by only a few pA
- Coil peak voltage isolation capability up to 10kV
- Instantaneous ±6V peak to peak output to plug directly into scope, data acquisition equipment, DVM or power recorders
- CE Marked
- Accuracy of ±1% of reading
