The LFR is a dual range ac current probe with a flexible, clip-around coil. It can be powered either by a single 9V battery or an external dc supply.

The LFR has market leading low frequency performance, optimised to give minimal phase measurement error from 45Hz up to 20kHz and the lowest possible noise floor. It also has a good high frequency performance e.g. 1.0MHz bandwidth for a 300mm coil.

The LFR has a 10:1 switch selectable current rating to give a wide measurement range in a single probe.

It is available in ratings from 60A up to 60.0kA and with coil lengths from 300 to 1000mm. Longer coils can be supplied on request.

The LFR is ideal for current monitoring in power measuring applications, of leakage currents, and for power quality measurements.

The LFR is a Rogowski current probe with all the benefits: easy to insert in confined spaces (8.5mm max coil thickness), not affected by dc current, is undamaged by current overloads and is non-intrusive.

The LFR can be used with oscilloscopes, power analysers and meters, acquisition cards and dataloggers.

The LFR is CE marked and complies with safety standard EN61010.

</table>

**Notes:**
- Distributed around the $f_L$ (-3dB) bandwidth. The peak to peak magnitude of the noise = 6.1 X Noise typ. (rms)
- The high frequency bandwidth is in part dependent on coil length. Contact PEM for values of $f_L$ for other coil lengths.
- Slew rate limitation

**HIGH FREQ. (-3dB) bandwidth**
- $f_L$: 1.0 MHz (for coil length 300mm)
- 600.0 kHz (for coil length 700mm)

**TYPICAL ACCURACY**
- Calibrated to ±0.3% with conductor central in the Rogowski loop. Calibration certificate supplied.
- Variation with conductor position in the coil loop typically ±1%

**TYPICAL LINEARITY**
- ±0.05% (full scale)

**DC OFFSET**
- max @ 65°C ±2.5mV

**ABSOLUTE MAXIMUM VALUES of di / dt (kA / μs)**
- PEAK: 6.0
- RMS: 0.3 @ 70°C (further information available on request)

(values must not be exceeded)

**COIL AND CABLE**

1. **COIL CIRCUMFERENCE**
   - 300, 500, 700 or 1000mm

2. **COIL CROSS SECTION** (max)
   - 8.5mm (14mm with sleeve)

**PEAK COIL VOLTAGE ISOLATION**
- 2kV

**TEMPERATURE RANGE**
- -20°C to 70°C

**INTEGRATOR**

1. **POWER SUPPLY**
   - Single 9V PP3 battery - battery life typically 50 hours
   - Plus-2 1/2 5mm socket for 12V to 24Vdc (±10%) DC supply
   - (Quiescent current 10mA)
   - Optional power supply available from PEM.
   - Battery inoperative with DC supply present

2. **INTEGRATOR BOX DIMENSIONS**
   - H = 28mm, W = 65mm, D = 90mm

3. **OUTPUT SOCKET**
   - BNC (output impedance 50Ω) - unit supplied with 0.5m BNC - BNC coaxial cable
   - Optional 0.5m BNC to banana plug cable available from PEM

**MIN. OUTPUT LOADING**
- 100kΩ (for rated accuracy)

**TEMPERATURE RANGE**
- -10°C to 55°C
