

The AN\_135KIT provides an easy method of evaluating the Asahi EQ-712L Linear Hall sensor IC in a “gapped core” current sensor application. The AN\_135KIT includes the Asahi EQ-712L linear IC mounted in the nominal 1.25mm wide gap cut into a 14mm x 9 mm x 5mm Ferrite core. This configuration produces a nominal output sensitivity of 37mV/A. The full scale current range is 40Arms or 57A peak. The kit includes a +5V regulator, however the circuit will work down to 2.7VDC. With the input voltage below 5V, the Hall IC supply is no longer regulated and the sensitivity, supply current and full scale output range will reduce by an amount directly proportional to the supply voltage. For example; at 3V, the sensitivity is 3/5 of 37mV/A will be equal to 22mV/A.

The Asahi EQ-712L has a very fast response time,  $< 5\mu\text{S}$ , thereby making it very useful for over current applications. The Asahi EQ-712L broadband output noise characteristic is low,  $< 5\text{mVpp}$ , to give an operating range of about 2000mV/2.5mV or about 800:1.

AN\_135KIT with mating connector

### Features

- Measures AC or DC currents in wires up to 8AWG
- Nominal Sensitivity:  $37 \pm 10 \text{ mV/A}$  for 5V Supply and  $22 \pm 7 \text{ mV/A}$  for 3V Supply (EQ-712L Magnetic Sensitivity of  $40 \pm 10 \text{ mV/mT}$ )
- Nominal Quiescent Output Voltage:  $2.5\text{V} \pm 0.10\text{V}$  at  $I_{\text{primary}} = 0\text{A}$
- Fast response time:  $< 5\mu\text{S}$
- Wide bandwidth: DC to 300kHz (-3dB)
- Low noise:  $< 5\text{mVpp}$
- Large Dynamic range  $> 800:1$
- Full scale output linear of  $2.5\text{V} \pm 2.0\text{V}$  (With input supply voltage of 5.0 to 15VDC)
- Supply current:  $\approx 8\text{mA}$
- Supply voltage range of 2.7V to 15V (Below 5.0V, the voltage to the EQ-712L is unregulated)
- Galvanic isolation between primary conductor and sensor
- Interface Connector - 4 Pin 0.100" centers (Mating connector included)
- Bi-directional sensing
- Regulated Voltage Output (+5V) Pin (available for external use- up to 20mA)
